

Save money on your old, damaged Double Ended Shearbeams. Return them to Massload and let us make a new loadcell for you.

We repair loadcells from many other manufactureres such as Sensotronics, Revere Transducers, HBM, Artech, Celtron, Rice Lake.

You can be assured that any loadcell that you have us repair will be in a 'like new' condition. This is because we do a complete overhaul on each and every loadcell. All the strain gauges, temperature, and span compensation are replaced with new sensors.

Save money while Massload refurbishes your used loadcells, and be assured of reliable and accurate weighing.

The cell is environmentally sealed and returned to you with a one year warranty.

Each repaired loadcell is tested for linearity, creep, and temperature compensation in exactly the same manner as a new loadcell.
