

Padlink Desktop

Padlink Desktop is a scale software package designed to work with Massload's wireless scale systems. This software works with PDA in your wireless scale system. Simply save your weighing transactions on your PDA, then when you get back to your computer, Hot Sync™ the database over, and print the results through Padlink Desktop using your own custom designed reports!

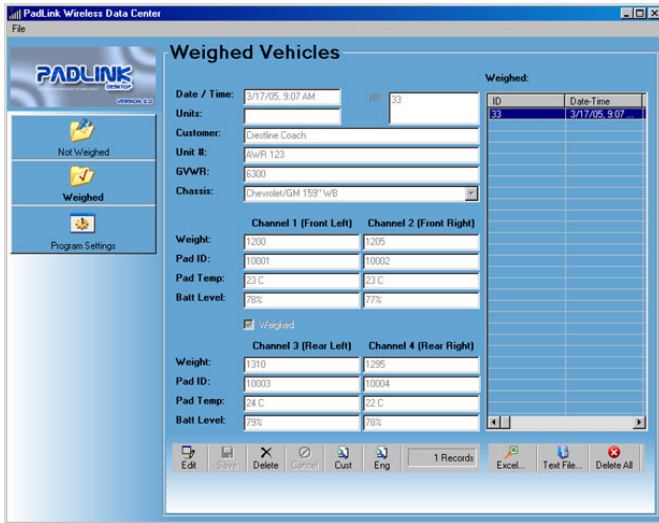

"Weigh it ... save it ... sync it ... print it. Easy."

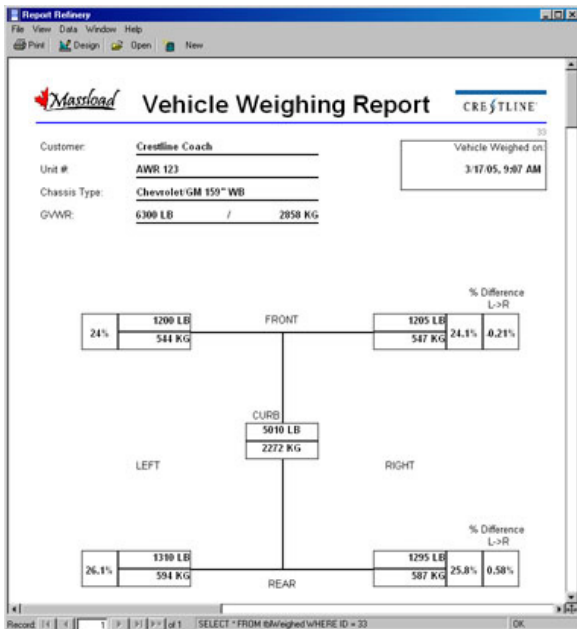

This software can be used in 2 different ways. It can be used to add new records to the database so that when HotSynced to the PDA, the person doing the weighing only has to find the existing record and add the weight data to the record. When the data is HotSynced again, the records that had weight attached to them show up on the 'Weighed Vehicles' screen, where the records with no weight stay on the 'Unweighed' screen.

This software package can also be used to get the data that was created on the PDA at the time of weighing. These records will show up on the 'Weighed' screen and can then be printed.

Use ReportRefinery to create powerful custom reports. Use syntax just like MS Excel to perform complex calculations and text manipulation! Print to any standard printer.

Easy to navigate main user interface.

Create your own customized reports!

- ::Data Saved on the PDA::
- ~ Date/Time of saved record
- ~ Weighing units
- ~ 4 User defined data fields, put in any data that you want
- ~ Each Channel: Weight, ID, Temp, Battery Level

- ::Database Funcions::
- ~ All data stored in MS Access database
- ~ Export data to Excel or text files for archiving
- ~ Edit saved data if enabled

- ::Scale Options::
- ~ Configurable gradsize, units, and motion window

- ::Security::
- ~ Password protect scale settings
- ~ Enable/Disable printing, deleting, editing, and exporting of data

- ::Printing::
- ~ Customizable weighing report

- ::Program Functions::
- ~ Persistent program settings, settings are stored from one session to another

Note: This software comes free with every wireless system that uses a wireless handheld and Palm™ powered PDA!

System Requirements:

CPU	Windows based computer, 500mHz or better, 20MB hard disk space
Palm™ Desktop Installed, HotSync® Manager Running	
CD-ROM	CD-ROM drive for program installation
